Wirechat Beta

Attachments

The Attachments feature allows users to seamlessly share files and media in conversations, enhancing the communication experience.

Enabling Attachments

Wirechat allows you to control how attachments are handled on a per-panel basis. You can enable all attachments at once, or selectively enable file or media attachments only.

Enable Attachments

Calling **`attachments()`** enables both file and media attachments. Setting this to **`false`** will completely disable attachments for the panel.

```php
use Wirechat\Wirechat\Panel;

public function panel(Panel $panel): Panel
{
    return $panel
        //..
        ->attachments();
}
```

File Attachments Only

Use **`fileAttachments()`** if you want to allow only document uploads such as PDFs, ZIPs, or text files.

```php
use Wirechat\Wirechat\Panel;

public function panel(Panel $panel): Panel
{
```
