Wirechat Beta

# Core Components

Wirechat is built on top of Laravel Livewire, providing a set of core components that handle everything from listing conversations to creating new groups. Whether you're customizing chat features or building new interfaces on top of Wirechat, understanding these components is crucial. Each one can be extended or overridden in your own namespace, giving you the flexibility to adapt Wirechat's functionality without modifying the package itself.

## # Available Wirechat Livewire Components

Below is an overview table of Wirechat's Livewire components. Each entry shows its default Livewire identifier (used in Blade), the namespace where you'll find the class, and any required parameters such as a **`conversation`** model needed for proper functionality.

| Livewire Identifier | Namespace / Class | Parameters |
|---|---|---|
| wirechat | `Wirechat\Wirechat\Livewire\Widgets\Wirechat` | None (No explicit param) |
| wirechat.chat | `Wirechat\Wirechat\Livewire\Chat\Chat` | `conversation` |
| wirechat.chat.info | `Wirechat\Wirechat\Livewire\Chat\Info` | `conversation` |
| wirechat.chat.group.add-members | `Wirechat\Wirechat\Livewire\Chat\Group\AddMembers` | `conversation` |
| wirechat.chat.group.members | `Wirechat\Wirechat\Livewire\Chat\Group\Members` | `conversation` |
| wirechat.chat.group.permissions | `Wirechat\Wirechat\Livewire\Chat\Group\Permissions` | `conversation` |
| wirechat.chats | `Wirechat\Wirechat\Livewire\Chats\Chats` | None (No explicit param) |
| wirechat.new.chat | `Wirechat\Wirechat\Livewire\New\Chat` | None (No explicit param) |
| wirechat.new.group | `Wirechat\Wirechat\Livewire\New\Group` | None |
