Wirechat Beta

Groups

WireChat's Group feature transforms simple messaging into a dynamic, multi-user conversation experience. Groups empower users to collaborate effectively by offering robust tools for managing members, assigning roles, and customizing permissions. Whether you're creating communities or coordinating projects, WireChat Groups provide the flexibility and control you need.

Enabling Group Creation

To allow users to create groups in your application, enable the required actions in your Wirechat panel:

```php
use Wirechat\Wirechat\Panel;

public function panel(Panel $panel): Panel
{
    $panel
        //...
        ->createChatAction()
        ->createGroupAction();
}
```

> *"Note: Disabling these actions will hide the buttons required for creating new groups in the UI."*

Group Settings

Panels let you configure group settings, so you can define different rules and limits for each panel.

Maximum Group Members

This option controls how many members a group can have within the panel.
