Wirechat Beta

After configuring broadcasting, start a queue worker to handle message broadcasting and other queued tasks:

```
php artisan queue:listen --queue=messages,default
```

▶ Queue Prioritization

Step 3: Step Development Server

To start your development server, run:

```
composer run dev
```

If you're not running the latest Laravel version, you can run: **`php artisan serve`** && **`npm run dev`** seperately

For more details, see Laravel's Tailwind and Composer Dev Command Documentation.

Publishing Translations

If you need to customize the language files, you can publish them using the following command:

```
php artisan vendor:publish --tag=wirechat-translations
```

Publishing Views

To modify Wirechat's Blade views, publish them with this command:

```
php artisan vendor:publish --tag=wirechat-views
```
