Wirechat Beta

Rooms

In addition to private 1-on-1 chats, WireChat also supports Groups, enabling multi-user conversations. Both chats and groups can be created easily through the UI or programmatically.

Learn more about Chats and Groups.

Messaging

Messages in WireChat can be sent in multiple ways—either via methods provided by the `'InteractsWithWirechat'` trait e.g., `'sendMessageTo($user)'` or through the built-in UI, which provides a ready-to-use chat interface.

All messages are broadcasted in real time via WebSockets, ensuring a fast and seamless communication experience.

Features

WireChat comes with a variety of features out of the box. These can be configured on a per-panel basis, giving you full control over the chat experience.

Configurable features include:

- File attachments
- Emoji picker
- Chat search
- And more
