Wirechat - Laravel Livewire chat package

Published on December 16th, 2024 by Yannick Lyn Fatt

Wirechat is a new and powerful Laravel Livewire chat package created by Namu Makwembo that brings real-time private and group communication to your application.

Key Features

1. Realtime Messaging and Search
2. Built with Livewire components

Cut PHP Code Review Time & Bugs into Half with CodeRabbit

admins, edit group permissions and more.

4. Smart message deletion that won't interrupt the entire conversation for other users.
5. Share media and other attachments
6. Reply to messages, files and attachments in the conversation
7. Customizable Theme (including Dark mode)

Installation

Before you install this package, ensure you are running:

- PHP version 8.1 or later
- Laravel version 10 or later
- Livewire version 3.2.3 or later

To install this package, run:

```
composer require namu/wirechat
```

Then publish the config and migration files, as well as symlink the storage directory for shared media and attachments:

```
php artisan wirechat:install
```

Next, run the migrations:

```
php artisan migrate
```

This package also depends on queues and web sockets using Laravel Reverb. So also ensure those are setup and running before starting your application.

Cut PHP Code Review Time & Bugs into Half with CodeRabbit

```
php artisan install:broadcasting
php artisan reverb:start
php artisan queue:work --queue=messages,default
```

To begin using WireChat, ensure you integrate the `Chatable` trait into the models you want to enable for chatting.

```
use Illuminate\Foundation\Auth\User as Authenticatable;
use Namu\WireChat\Traits\Chatable;

class User extends Authenticatable
{
      use Chatable;

      ...
}
```

Now you should be able to navigate to `/chats` in your application, search for and select a user to start a conversation with.

Options are also available for you to programmatically start chats, send messages, etc.

You can learn more about this package in the documentation and also view the source code on GitHub.
